

## Asian Multicolored Lady Beetle

*Harmonia axyridis*

Despite the fact that this non-native beetle is an effective biological control agent of aphids and other pests, it is a nuisance to homeowners when it invades houses in large numbers while searching for protected sites to overwinter in the fall. The adults occurs in many color forms, from pale yellow-orange to bright red-orange, with or without black spots on the wing covers. Prevention is the key to keeping this beetle from getting into homes.

### Control

- Seal windows and doors with weather stripping.
- Caulk cracks around windows, doors and pipes.
- Screen or seal attic and exhaust vents.
- Use a vacuum cleaner to pick up beetles in the house. Using pesticides to kill them is not suggested.
